Pet's Name _____

How would you like to receive notification when your pet's surgery is completed?

Text Message # _____

OR

Phone # _____

Alternate # _____

Procedure to be done today (in your words): _____

Please list all medications given in the last 72 hours. This includes prescription and over the counter

medications _____

Today is surgery day. We know this can be an anxious time and we are always available to answer any questions concerning the procedure. Surgeries are usually performed between 9 am-12 and 12-3 pm, and we strive to call every client after a procedure to go over the details with you.

PAC will perform a pre-anesthetic physical exam and we require pre-anesthetic blood work. This blood work consists of a CBC, chemistry panel and electrolyte level. These tests help alert our doctor to the presence of dehydration anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. In addition, these tests establish a baseline that can later be used for a more accurate diagnosis and treatment if a problem does arise. Although performing these tests cannot guarantee the absence of complications, it can significantly minimize the risk to your pet and provide you with peace of mind.

Our staff will be monitoring your pet at all times while under anesthesia in order to minimize anesthetic complications. We also have a computerized monitor that records heart rate, blood pressure, oxygen levels, respiration, ECG and core temperature. Some surgeries will require pain management before, during and after surgery. Additionally, pain medication may be sent home with you.

Our clinic does not provide 24 hour care. If your pet requires further medical supervision during the hours we are closed, you have to the option to make arrangements to pick him/her up from PAC and take him/her to one of the area facilities that provide care during hours the hospital is not staffed.

To protect other patients, all pets must be free of internal and external parasites, and must be current on vaccinations. If not, they will be treated at the owner's expense. We will make an effort to inform you of any such charges and fees involved in treatment under this paragraph. If you cannot be reached you will still be obligated to pay the total charges for your pet's medical attention. All pet's that are admitted to PAC will be given a Capstar (\$6.10) tablet to reduce our risk of flea infestation.

OVER

It may be necessary to provide medical and/or surgical procedures which are not anticipated for the safety or care of your pet. Failure to be reached on the day of the procedure may result in postponement of the surgery/treatment. Please CHECK (✓) ONE OPTION that will allow us to handle your pets' decisions in his/her best interest (i.e., tooth extraction, IV fluids, additional pain medication, etc.) if needed.

PLEASE CHECK (✓) ONLY ONE OPTION above.

YES, do whatever my pet needs, no matter the cost: _____

OR

I will be available, please call me before ANY additional procedures: _____

OR

NO, only do what we have scheduled and discussed no matter what: _____

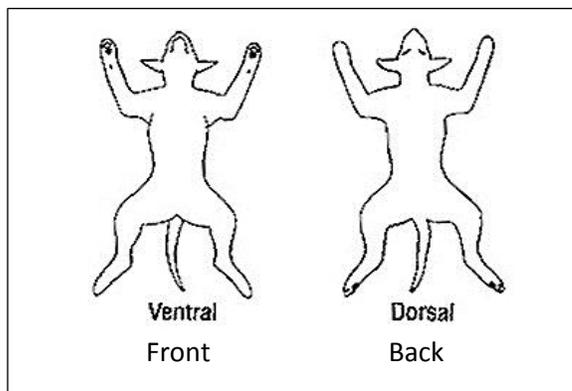

MICROCHIP: IF your pet has not been microchipped, now is the time to do so. We offer a 10% discount off of microchips when they are implanted while under anesthesia. This permanent chip is registered with the information you provide to get your pet back if ever lost.

Please check one:

_____ Yes, microchip my pet

_____ No, DO NOT microchip my pet

_____ Already Microchipped

I certify that I am the owner and responsible party for the above named animal, and that having understood the risks involved, including death, have the authority to grant you my consent to receive, prescribe for, treat, induce anesthesia, and/or operate on my pet. All charges, including boarding costs (if necessary), shall be paid upon release of my pet from PAC.

After carefully reading the above, I have signed in agreement.

Date

BARC spay/neuter vouchers ONLY:

Please let us know when you drop your pet off if you have a BARC voucher. You can elect not to have pre-anesthetic blood work and pain medication ONLY if you have purchased a voucher. The vouchers do not cover the additional cost of these tests, but are always recommended.

_____ Yes, do the pre-anesthetic blood work (additional fee applies) _____ No, do not do the pre-anesthetic labs

_____ Yes, administer pain medication to my pet _____ No, pain medication is declined

CATS ONLY – Pain medication

Simbadol is a pain medication injection for cats that lasts for 24 hours. It is administered before surgery to reduce post-surgical pain. If the cat is in less pain, he or she will recover faster.

Please check if you would like Simbadol to be administered to your cat today.

_____ Yes, please administer Simbadol

_____ No, DO NOT administer Simbadol
